

Re:Grow Rideau

A. Low-income Population Density

B. Unhoused Population Density

C. Residential Instability in Flood-Affected areas
due to climate uncertainty

Re:Grow Rideau

Communities around Rideau and the Canal in Ottawa face a high risk of displacement as climate change intensifies. This project envisions a future where these low-income neighborhoods can thrive through clean energy and self-sustaining urban agriculture. By strengthening community resilience and reducing reliance on fossil fuels, the design explores the deep connection between the urban landscape, agricultural self-sufficiency, and sustainable energy solutions.
